

# Class 1 Resources: What Claude Is and Why This Matters Now

This file has everything you need from Class 1. Keep it open during the session and refer back to it when you practice on your own. The prompt blocks are ready to copy and paste directly into Claude.

---

## BD Context Block

Paste this at the top of any prompt where the output is for a Bangladeshi user. It tells Claude what your default user looks like so you do not have to describe them from scratch every time.

Context for every output:

- Users are 18-45, mobile-first, often on 3G or 4G.
- Default device is a sub-15,000 taka Android with under 4GB RAM.
- Users expect bKash-style payment flows. Green is the trust color.
- Bangla and English mix is normal. Numbers are mostly English digits.
- Animations over 150ms feel laggy on common devices. Avoid them.
- Trust signals matter more than aesthetics. Show the policeman, not the gradient.

Paste this block at the top of any prompt where the output is for a BD user. It tells Claude what your default user looks like so you do not have to repeat it every time.

---

## Set up before Class 2

Three things, about ten minutes total. You do not need any of it for the Class 1 assignment, but you do from Class 2, so do it this week.

1. **Install the Claude Desktop app** (free) and sign in. This is where you work from now on: Chat, Cowork, and Claude Code in one window.
  2. **Get Claude Pro** (about \$20/mo). The course runs on it. You do NOT need the \$100+ Max plan.
  3. **Download the course repo.** Go to [github.com/mshadmanrahman/claude-for-designers](https://github.com/mshadmanrahman/claude-for-designers), click the green **Code** button, choose **Download ZIP**, and unzip it to a folder. No Git knowledge needed. From Class 2 every project file lives here: the EduBridge brief, the seven skills, the working contract template, the career vault. Your host will also drop the link in the class chat.

## **Your assignment: Build your Context Moat**

Run one real brief through Claude twice, once with no context and once with the BD Context Block above, then write down what you know that Claude cannot. Use your own last project brief: your real context is the point of the exercise. The full brief (what to submit, what good looks like) is in your Class 1 assignment sheet.
